Personal Statement

I've loved games and gaming ever since I first started playing them on the playstation 2 with games like super monkey ball adventure. I later continued to find out more about games moving to other consoles like the Wii and Xbox 360. Until I eventually moved to PC around 2013 where I learnt I could create my own games and started doing so ever since, starting out using websites such as Scratch. I now, years later, use a variety of tools and skill sets to make games. Currently my main places of game creation are using C++ with a library or Unreal Engine 5.

Education

Chesterfield College, Chesterfield - Level 3 Game Design & Development
September 2019 - July 2021
